Radiant 4M Supplier Portal

System Walkthrough & Project Handover

Centralised Platform

A unified portal for suppliers to seamlessly submit monthly 4M change declarations (Man, Machine, Method, Material).

Streamlined Workflow

Eradicates friction between external vendors and internal quality management teams.

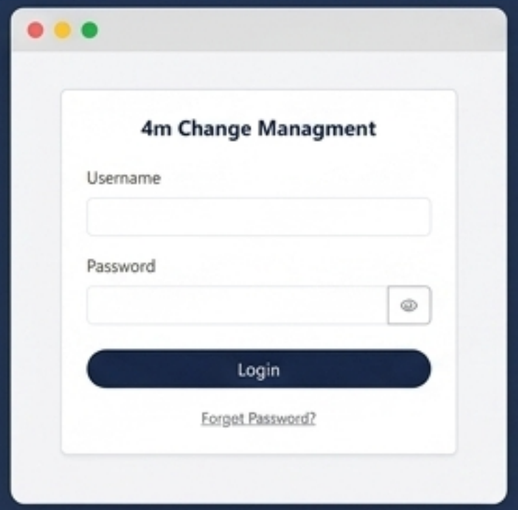

Data Integrity

Guarantees reporting accuracy through structured data entry and comprehensive administrative oversight.

NotebookLM

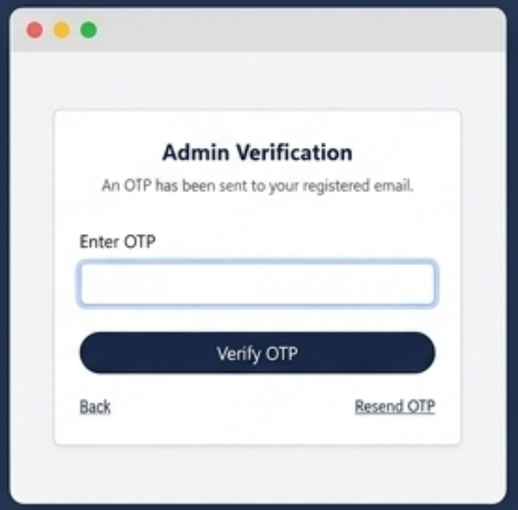

Secure Access Protocol: Multi-Role Authentication

Zero-trust entry protocols protecting sensitive supplier and system data.

Gate 1: Credential Entry

Secure login portal for all users featuring credential validation and built-in password management.

Gate 2: Privileged Role Verification

Mandatory 2-step verification for administrative roles via automated email OTP.

Gate 3: Encrypted Session Security

Active session security maintained exclusively through Verified SSL encryption to protect sensitive user credentials.

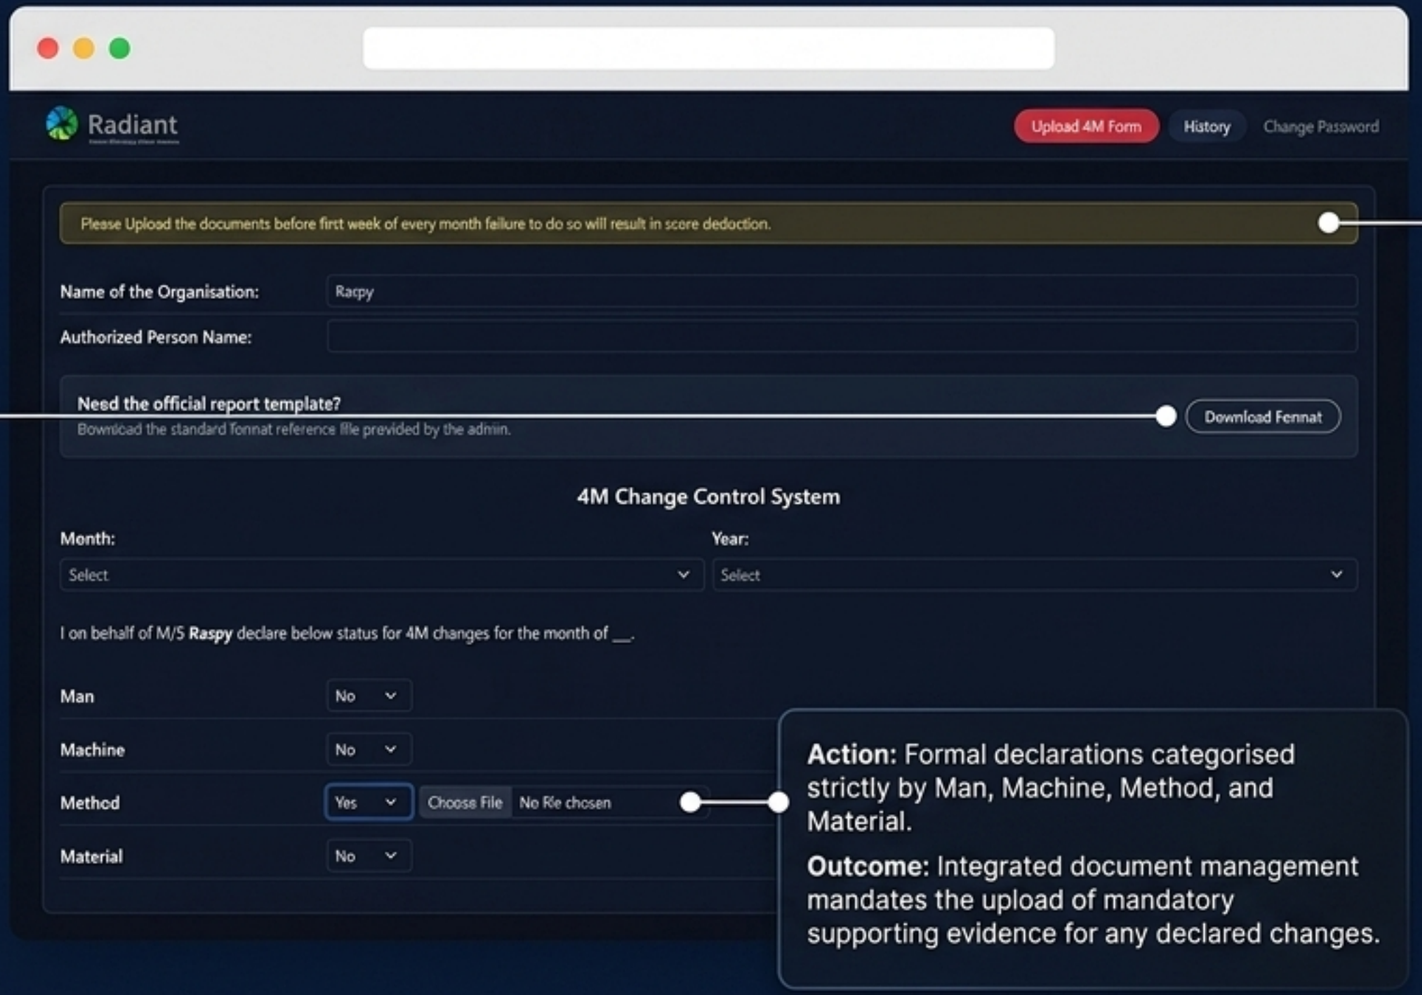

NotebookLM

Supplier Interface: Active Change Declarations

Standardising the submission of Man, Machine, Method, and Material updates.

Action: Direct access to official reporting templates via the Download Format feature.

Outcome: Ensures suppliers always use the most current, compliant documentation.

Action: Automated alerts display critical deadlines on-screen.

Outcome: Notifies suppliers that late submissions will directly result in compliance score deductions.

Action: Formal declarations categorised strictly by Man, Machine, Method, and Material.

Outcome: Integrated document management mandates the upload of mandatory supporting evidence for any declared changes.

NotebookLM

Historical Telemetry: Submission Tracking & Logs

Empowering suppliers with real-time compliance auditing and document archiving.

Functional Capabilities

Audit Past Records

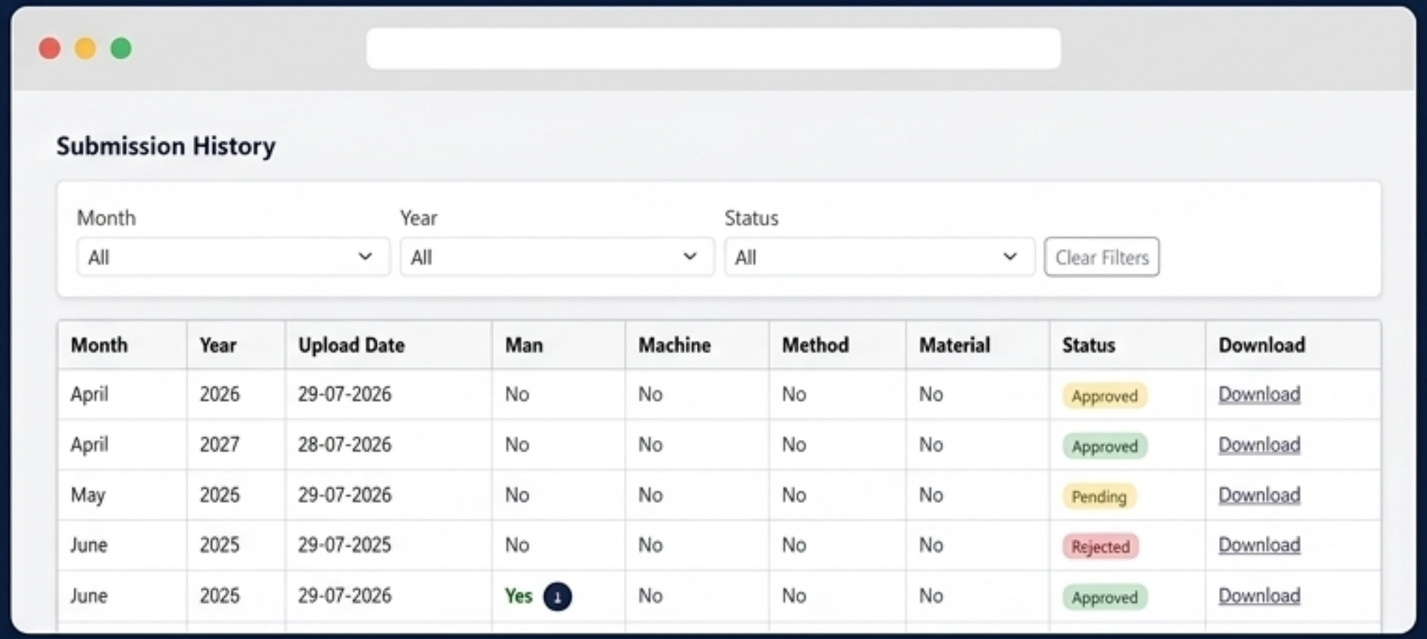

Advanced filtering capabilities allowing users to instantly audit records by specific timeframes (Month/Year).

Archive Documents

One-click download functionality enables immediate archiving and reviewing of historical compliance documents.

Comprehensive Logging

Complete table view of all prior submissions organised by month, year, and status.

Real-Time Status Tracking

Approved
Submission verified by quality management.

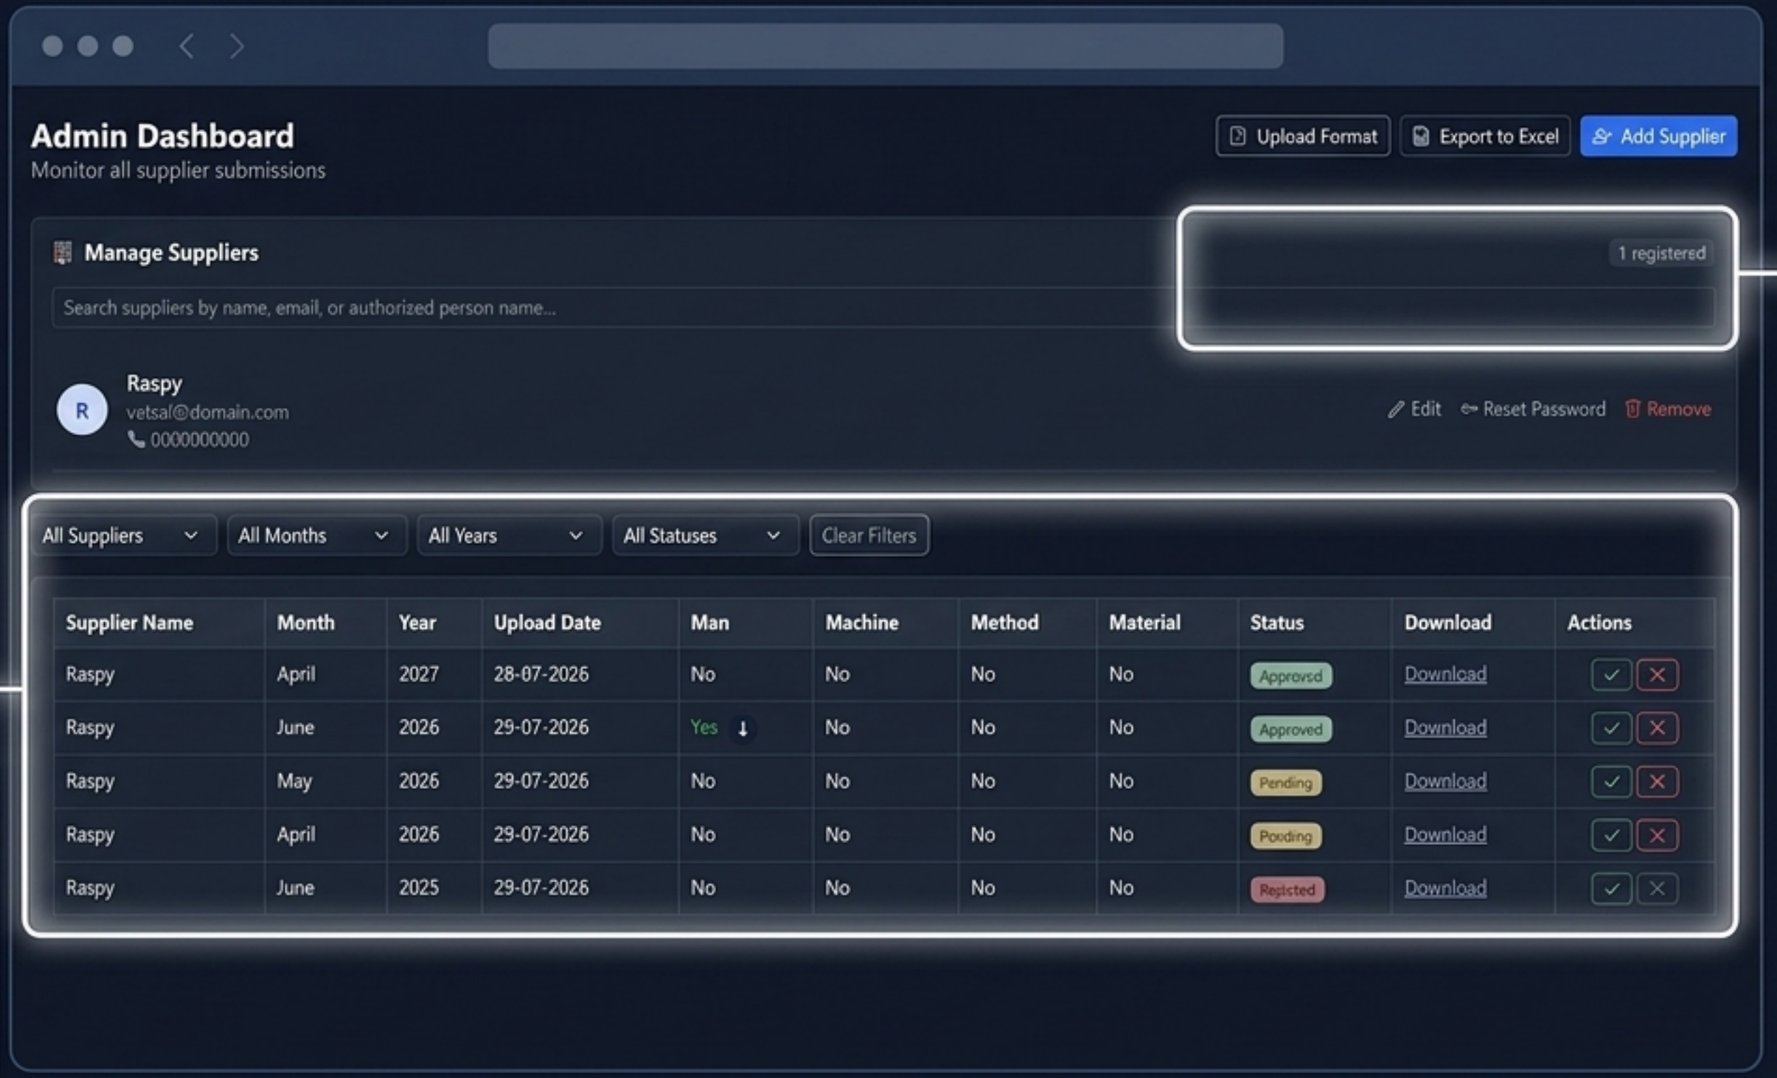

Pending
Awaiting administrative review.

Rejected
Submission flagged for correction or missing evidence.

NotebookLM

Macro-Synthesis: Centralised Administrative Management

Transforming fragmented supplier inputs into unified management intelligence.

Vendor Management & Portability.

- Vendor management tools to add, edit, or remove supplier profiles and reset passwords.
- Data portability features including Export to Excel for offline analysis and auditing.

The Global Submission Grid.

- Master dashboard for quality managers to review, approve, or reject pending declarations.
- Global search and filter tools for monitoring submissions across the entire supplier network from a single screen.

Technical Handover: Infrastructure & Deployment Matrix

Core architectural requirements for hosting and maintaining the web application runtime.

Resource	Purpose / Specification
Server Environment	Dedicated server environment to host the core web application runtime.
Domain / Subdomain	Provides the secure, highly accessible web portal entry point for all users.
Centralised Database	Essential for storing application state, supplier records, and historical audit logs.
Verified SSL Certificate	Mandatory to secure all web traffic and sensitive data via HTTPS.
Automated Email Service	API integration required for automated OTP verification and system notifications.
