Radiant 4M Supplier Portal

Project Handover & System Walkthrough

Centralised platform for suppliers to submit monthly 4M change declarations (Man, Machine, Method, Material).

Streamlines communication between vendors and quality management teams.

Ensures data integrity through structured reporting and administrative oversight.

NotebookLM

Security & Multi-Role Authentication

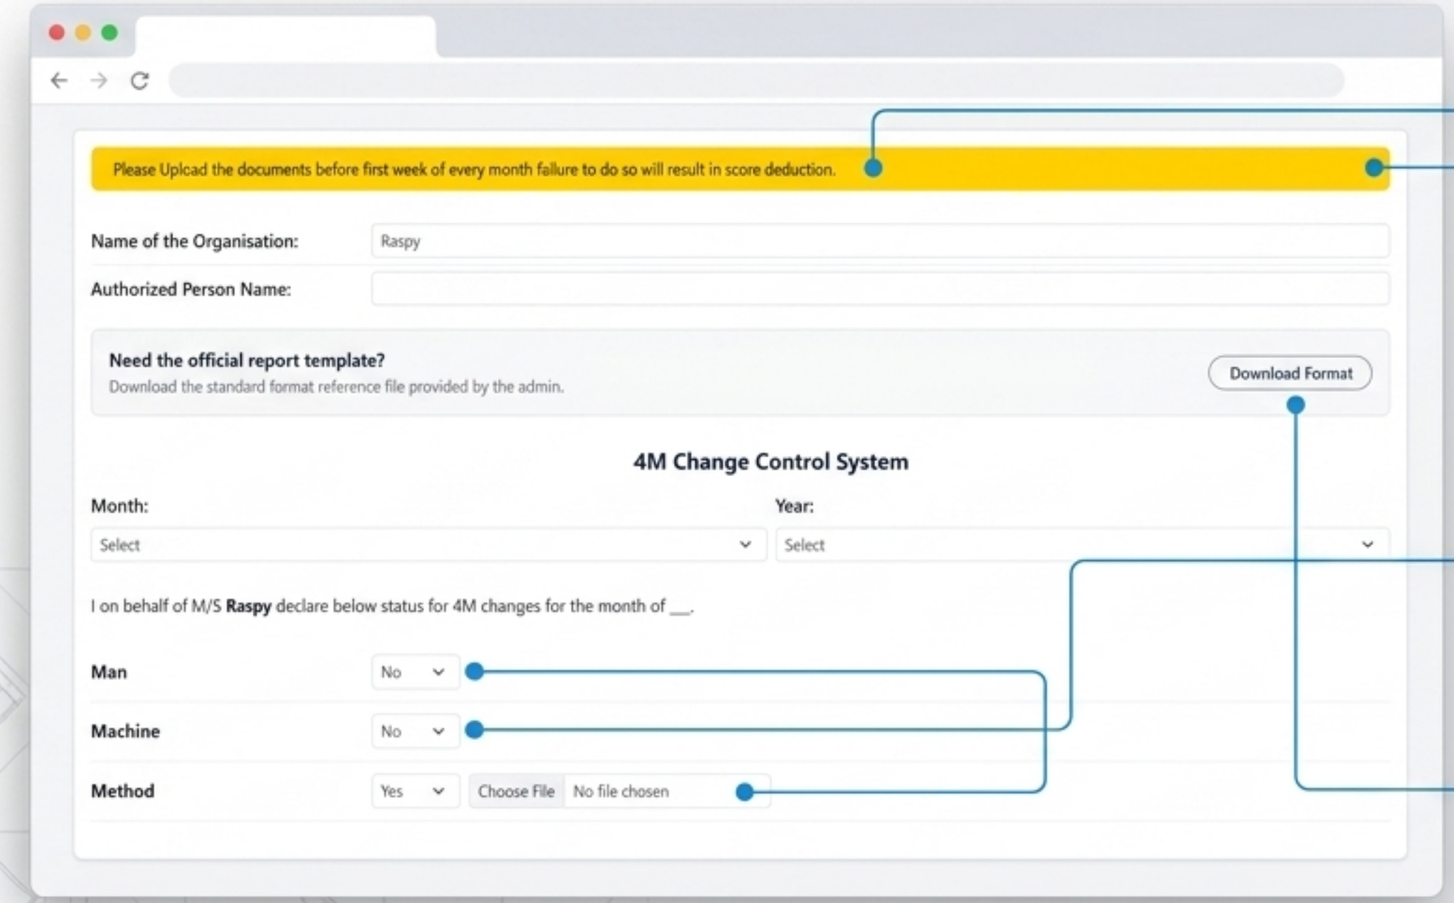

Secure login portal for all users featuring credential validation and password management.

Mandatory 2-step verification for administrative roles via automated email OTP.

Session security maintained through SSL encryption to protect sensitive user credentials.

NotebookLM

Supplier Change Declaration Interface

Formal declarations categorised by Man, Machine, Method, and Material changes.

Automated alerts notify suppliers that late submissions result in compliance score deductions.

Integrated document management system for uploading mandatory supporting evidence.

Direct access to official reporting templates via the Download Format feature.

NotebookLM

Submission Tracking & Historical Logs

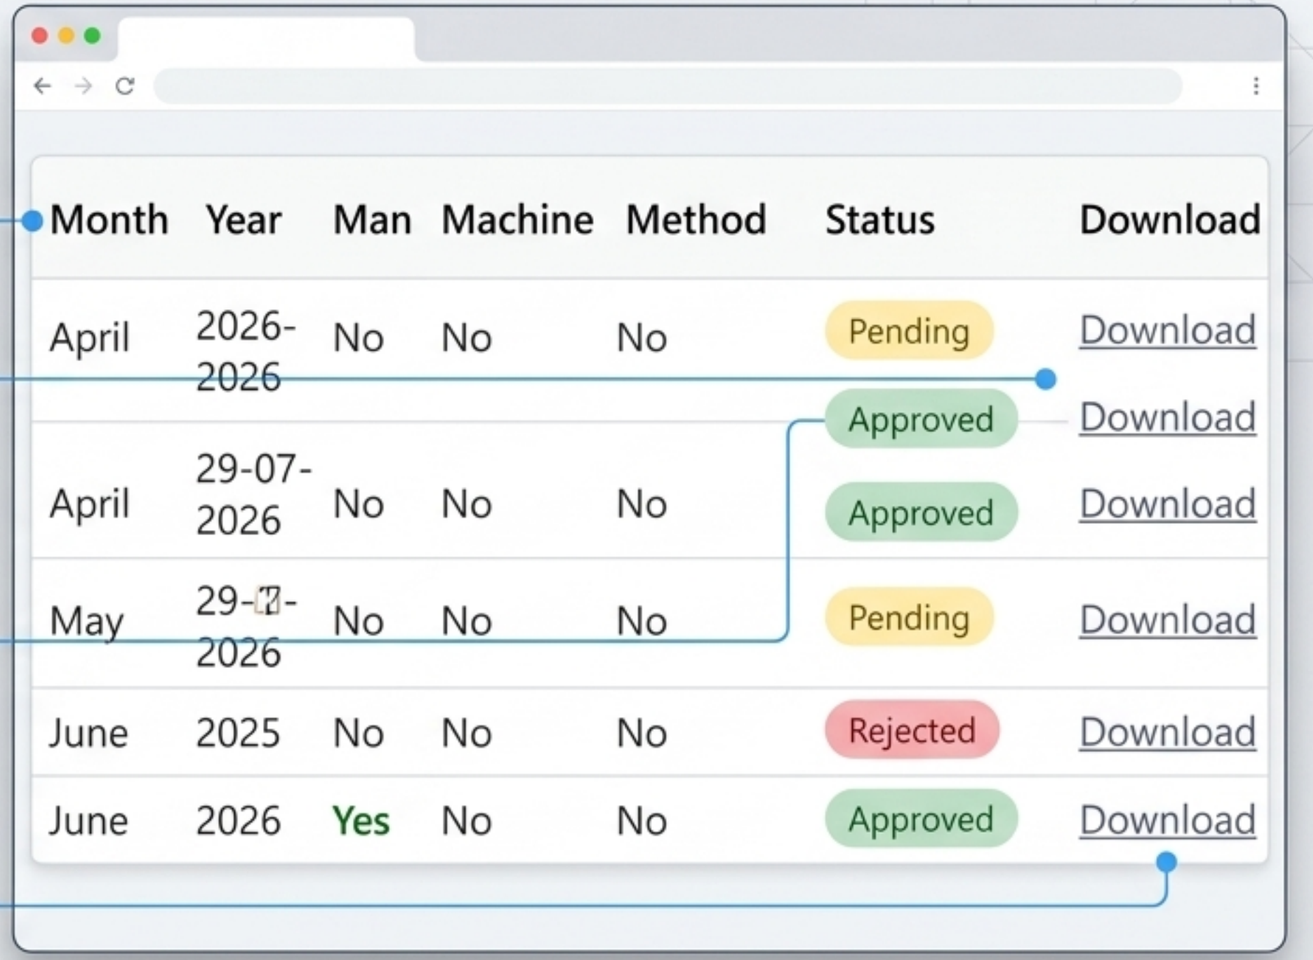

Comprehensive table view of all prior submissions organised by month, year, and status.

Advanced filtering capabilities allowing users to audit records by specific timeframes.

Pending
Approved
Rejected

Real-time status tracking indicating if reports are Pending, Approved, or Rejected.

One-click download functionality for archiving and reviewing historical compliance documents.

Month	Year	Man	Machine	Method	Status	Download
April	2026-2026	No	No	No	Pending	Download
April	29-07-2026	No	No	No	Approved	Download
May	29-[illegible]-2026	No	No	No	Approved	Download
June	2025	No	No	No	Pending	Download
June	2026	Yes	No	No	Rejected	Download
					Approved	Download

NotebookLM

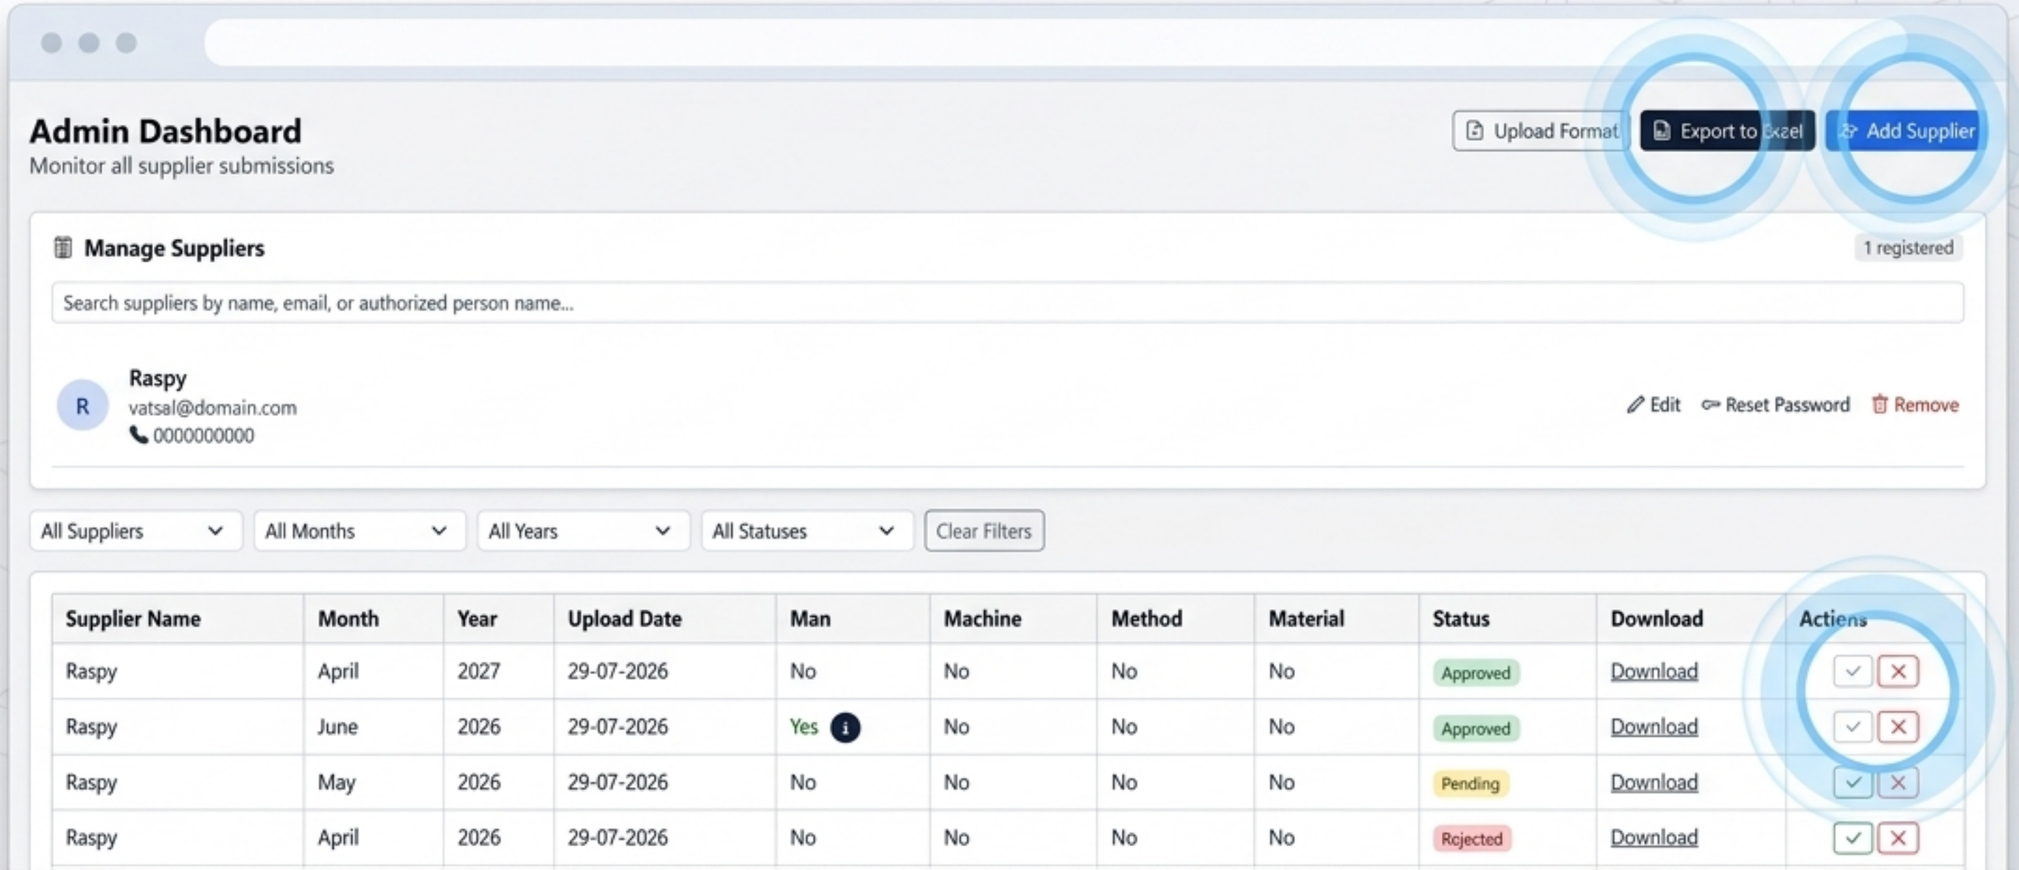

Centralised Administrative Management

Master dashboard for quality managers to review, approve, or reject pending declarations.

Vendor management tools to add, edit, or remove supplier profiles and reset passwords.

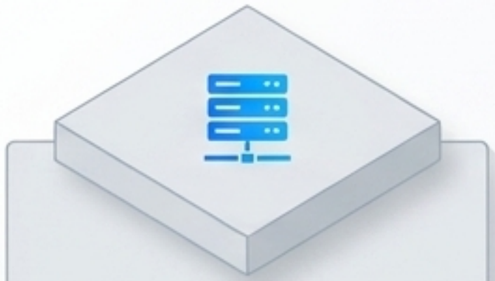

Global search and filter tools for monitoring submissions across the entire supplier network.

Data portability features including Export to Excel for offline analysis and auditing.

NotebookLM

Infrastructure & Deployment Requirements

Dedicated server environment to host the core web application runtime.

Centralised database for storing application state, supplier records, and audit logs.

Verified SSL certification to secure all web traffic and sensitive data via HTTPS.

Automated email service integration for OTP verification and system notifications.
